

Station Description Sheet **TST_040**

1. General Information
2. Geographical Information / Geomorphology
3. Geological Information
4. Geotechnical Site Characterization
5. Geophysical Site Characterization
6. Site Response
7. References

1. GENERAL INFORMATION

Photo 1: Outside view of the hosting building

Photo 2: The TST_040 sensor

Station Code: TST_040

Network: Euroseis

Instrumentation: Check the up-to-date EUROSEISTEST stations history file at <http://euroseisdb.civil.auth.gr/stations>

Power supply: AC

Housing: in a 40m deep borehole at the center of the valley

2. GEOGRAPHICAL INFORMATION / GEOMORPHOLOGY

Figure 1: Location map of TST_040 station

Location: in the Mygdonian basin

Elevation (from sea level): -40.0 m

Station coordinates: 23.2906°E / 40.6638°N

Projection system: WGS84

Site morphology: Valley center

3. GEOLOGICAL INFORMATION

Legend

- Holocene**
 - Yellow: Lacustrine sediments
 - Dark brown: River deposits/torrent beds
 - Light brown: Valley deposits
- Pleistocene**
 - Orange: Lacustrine sediments
 - Yellow: Terrestrial (river and flood) red beds
- Quaternary**
 - Light green: Alluvial fans
- Alpine formations**
 - Pink: Two-mica and biotite granite
 - Dark brown: Two-mica gneiss

Figure 2: Geological map of the central Mygdonian basin

Surface geology (from geological map): on Holocene valley deposits

Reference for geological map: Geological map of Greece - Scale 1:50000, Map Sheets of "Thermi" and "Zagliverion", (IGME, 1978)

Boreholes (with core description) in the proximity of the station: not known.

4. GEOTECHNICAL SITE CHARACTERIZATION

Geotechnical site characterization data for station TST_040 include:

1. Sampling borehole (EUROSEISTEST Project Reports, 1993-1995).
2. Normal Penetration test (EUROSEISTEST Project Reports, 1993-1995).
3. Cone penetration test (EUROSEISRISK project reports, 2002 – 2005).
4. Laboratory tests (G-γ-D curves, etc.) (EUROSEISTEST Project Reports, 1993-1995).

Data are available in ascii format in:

http://euroseisdb.civil.auth.gr/uploads/station/geotechnical/20/Site_characterization_geotechnical_TST_040.txt

Figure 3: Geotechnical data at station TST_040

Figure 4: Mean G/G_0 - γ - D curves from resonant column and cyclic triaxial tests for all geotechnical formations occur at station TST_040. The curves describe the shear modulus degradation with the shear strain and the respective internal damping increase.

5. GEOPHYSICAL SITE CHARACTERIZATION

Geophysical site characterization data for station TST_040 include:

1. Shear wave velocity values (V_s) / determined by Surface Wave Inversion method (Raptakis et al., 2000).
2. Compression wave velocity values (V_p) / determined by Surface Wave Inversion method (Raptakis et al., 2000).
3. Quality factor values (Q_s) / determined by Surface Wave Attenuation Analysis (Raptakis et al., 2000).

Data are available in ascii format in:

http://euroseisdb.civil.auth.gr/uploads/station/geophysical/20/Site_characterization_geophysical_TST_040.txt

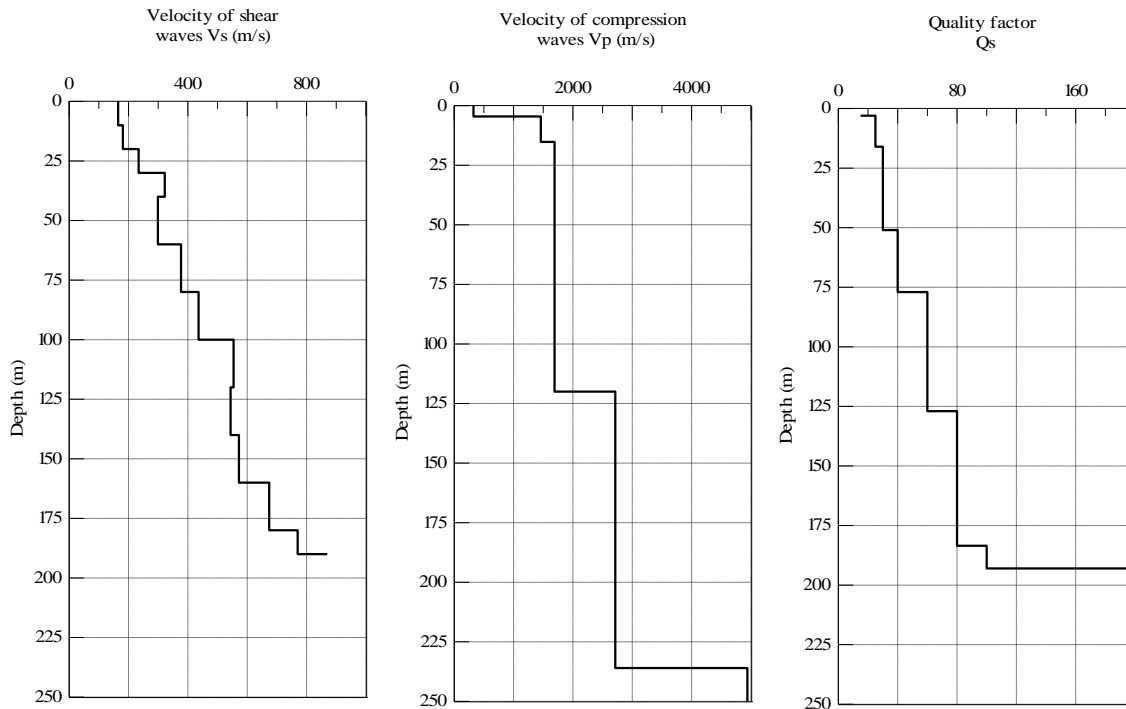

Figure 5: Shear and compression wave velocity and Quality factor values at station TST_040.

6. SITE RESPONSE

The reader is referred to site response information available at the surface (station TST) at:

http://euroseisdb.civil.auth.gr/uploads/station/response/18/Site_response_TST.txt
